

Spare Die and Machinery Parts

Precise Performance

Each Apex tooling component is cataloged with a unique part number and engineering drawing for fast, convenient reordering with the assurance of exactly duplicated replacement parts.

But Apex doesn't stop there. We also provide a full range of support manufacturing services that include die resharpener/rework as well as the capability to produce many other machine and equipment parts and assemblies.

Remarkable Reworks!

Our battery of high-speed CNC machining centers and automation along with high-precision conventional tools are backed by in-house engineering running advanced software including 3-D modeling. This enables us to efficiently produce close-tolerance, high quality spares as well as contract-machined components. In many instances, we can rework existing cutting dies to new standards.

Our engineering staff is thoroughly conversant in all aspects of metal container manufacturing and can provide assistance with the initial design as well as the development of prototype tooling.
