

Engineering and Design

Apex engineers can design your production tooling for a specific need – working either from your supplied drawings or sample parts and pertinent information. Have a concept or need prototype work? Let our technical staff assist with the evaluation and development – they're thoroughly experienced in virtually every aspect of container manufacturing and packaging.

We Speak "Engineering"

Maybe you're remanufacturing existing machinery, or taking a concept through implementation. Or, maybe it's as simple as you've got an in-house engineering staff that would appreciate working with supplier/colleagues who speak their language – in those cases and many more – customers always receive added value from the professionals at Apex.

Latest Software Platforms

Apex designers and engineers use 3-D modeling software that makes it easier to visualize finished parts. 3-D modeling also improves coordination with CNC programmers making programming faster, with less chance for error. At the same time, 3-D modeling facilitates customer communications.

Hit the Ground Running

At Apex, your project hits the ground running. We leverage an unmatched experience curve to reduce design/engineering lead times and/or set-up times. Chances are, at one time or another, we've handled a project something like the one you need now. This gives us a head start towards finding your optimal solution.
